"The boards arrived and they look extremely well made. Great job!

Thank you very much and we hope we'll make business soon."

Pedro Marques from Portugal

"Hello Alex!

The PCB's are working perfect! Everything is fine!..."

Jim from Greece

 "The boards arrived to us yesterday.

We check them and are working fine.

You did a great job, thanks!"

Ciprian from Romania

" I received the boards. They are perfect. Thanks for making them so quick."

Mark from Netherlands

"Thanks for your quick reply. A pleasure to do business with you and your company!

Please start production. And please order the parts so they arrive in time.

I received the boards and they were perfect. It is great for me to see you can combine smd and Th.

I will recommend your company to others. It works much better than these China companies.

So keep up the good work!"

Mark from Netherlands

"Today

i took the pcb

It is a masterpiece"

Stavros from Greece

"I received the boards. They are looking very good. Exactly what I designed"

Maurice from Netherlands

“We have always experienced two problems with PCB manufacturers in the UK and Europe – it took ages to get the board right and then it took a long time to get the actual product. Imagine

our surprise when we found Micron20 in Sofia. They gave us an instant quote and a choice of prices for either 7, 10 0r 15 day delivery – something that is unheard of in the UK! To top it all, the PCBs were perfect and actually arrived a day earlier than promised. Fantastic service."

Soo from United Kingdom

 "I designed the pcb layouts by myself using ORCAD, then I send the files to a Bulgarian company (Micron20), 'cause at that time I was in Sofia for my job, who makes a good quality pcbs for a cheap price (compared to the italian ones), but I think that it should be possible for them to deliver the pcbs at least around Europe."

Giuseppe from Italy, the opinion was taken from midibox.org

“My colleagues in Vancouver, Canada had toiled for many months trying to get a new body scanner concept into production, but failed repeatedly to find the required technological help. That is until we happened to mention the problem to Bill Archer of Archer Consulting Services Ltd, who suggested a company they had worked with for the past year. That turned out to be Micron20. Bill took the technical summary from us and within a week he had come back to us with a series of technical questions that Micron20 had asked, in order to develop the concept further. It is very refreshing to meet true professionals in this field and with Bill’s help, we are confident that our relationship with Micron20 will last for many years.”

E Shardelow, Vancouver, Canada

 "The boards, you sent us are very good. We would like to put a second order..."

 Kostas from Greece

"EXCELLENT!

 Many people ask me:

- Why with a Bulgarian company ?

- Why not with Chinese or Spanish ?

I asked for more than 20 quotations. You're the only (USA, Asia, Europe) that can deliver PCB, PCBA with or without your components, manual solder, etc etc. In addition no other company gave different timings..."

Vidactive from Spain

" Dear Christofor, Petya, Alexander and Asen,

we received your nice card and we want to thank you about this.

We really appreciate this...

We have a lot of pleasure in working with you! "

Partner in France

" I received the pcb boards! Very good job! "

Dimou from Greece

“Package received, all boards tested, all boards working.

Thank you for the good work.

I am looking forward to do business with you again.”

Balazs from Finland

“We have always experienced two problems with PCB manufacturers in the UK and Europe – it took ages to get the board right and then it took a long time to get the actual product. Imagine our surprise when we found Micron20 in Sofia. They gave us an instant quote and a choice of prices for either 7, 10 0r 15 day delivery – something that is unheard of in the UK! To top it all, the PCBs were perfect and actually arrived a day earlier than promised. Fantastic service.”

Soo from United Kingdom

“After we used Micron20 to manufacture some PCBs for our old product, we decided to talk to them about a problem that we had been trying to solve with many ‘experts’. We had spent a lot of money visiting ‘specialist’ people and giving them exactly what we were trying to achieve but we never had any success at any level. Basically, because the people we spoke to did not have the first clue about our chosen modality. Within one week of planning our trip to Sofia, Micron20 had assembled a specialist team to meet us to discuss our vision. Without fuss or drama, they translated what we wanted within 3 months (we had spent 6 years before this with various ‘experts’!!) – and their vast technological experience delivered the results we wanted. The cost of all this work was very fair and coupled with the great hospitality we were given on our visit, we have a very good working relationship with the Micron20 team and have now commenced production on our brand new product. Once again, thanks for the incredible expertise and service levels.”
